

TANK GAUGER PRO

Tank Inventory Management Software

TANKGAUGERPRO is a software tool for managing and tracking all of your daily storage tank volume operations. The software readily displays on a tank basis, the product, date, time, feet, inches, 16ths, temperature, gross volume, net volume, shippable volume and available volume. The software can also accommodate an allowance for volume that may be displaced by water.

The information can be viewed in a spreadsheet format (shown below) or viewed in a graphical representation. A friendly interface is available for entering the general tank characteristics and tank strapping data as well. The user can specify a selection set of tanks for viewing. As an example, the user may want to view the total volume for all of the Naphtha tanks combined for the entire site.

The software can be configured to interface with the popular **SAAB/ROSEMOUNT™ Radar Level Gauge System**. When used with the **SAAB/ROSEMOUNT™** radar system, the interface can automatically collect and manage information from multiple tanks. The program can be configured to poll the tank data at specified intervals. The data can also be used to fashion reports for product movement via the built-in report engine.

TANKGAUGERPRO

Tank Inventory Management Software

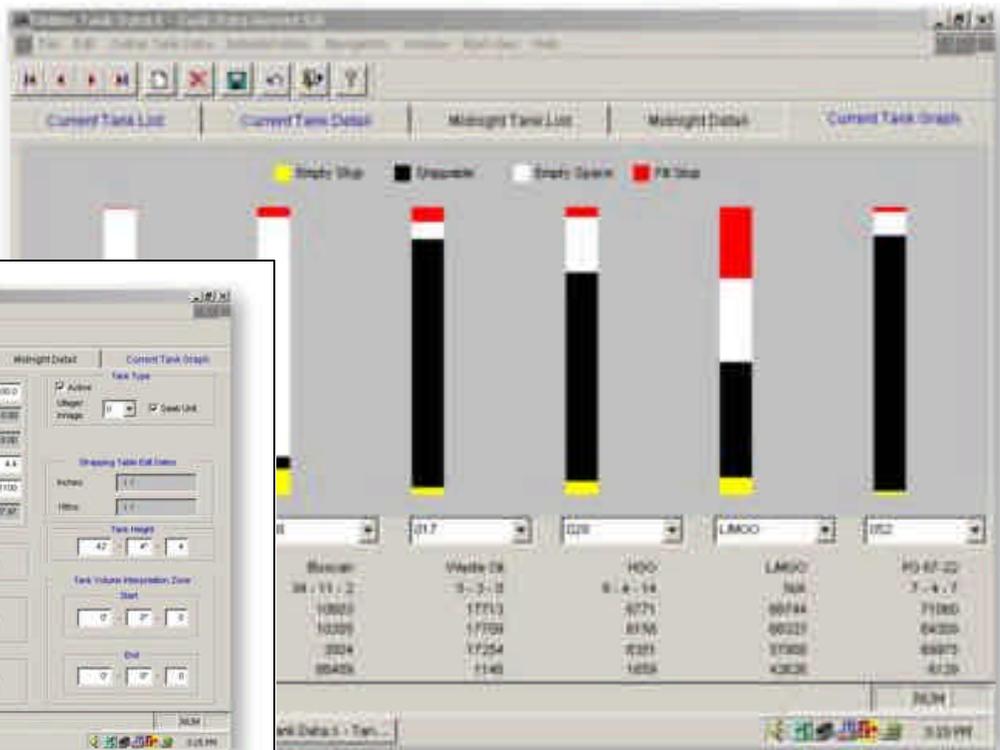

With **TANKGAUGERPRO** you get the ability to graphically compare the volume of any tanks within the facility with the click of a mouse. And you get the data real time. The software is fully networkable and can reside on any PC equipped with MSWindows© (Win95, Win98, WinNT, Windows 2000 or WindowsXP).

The software has complete inventory functions that present and process all measured data and tank gauging calculations according to API standards.

TANKGAUGERPRO is EASY! Easy to work with, easy to install and configure on a PC and easy to connect with other systems and Windows programs. Wizards guide you through installation and configuration. This makes it easy to install the program from the CD and set-up the tanks needed.

Shown below are the tank volumes in a graphical view and a detailed view of the non-graphical view of tank detail information.
